## General Information

### Eaton Lubrication Philosophy

**In promoting component reliability and longevity, proper lubrication is the key to a sound and effective maintenance program. Without effective lubricants at proper levels, remaining maintenance procedures will not keep components functional.**

We believe synthetic lubricants have proven to be superior to petroleum products and represent opportunities to promote superior maintenance and bottom line operating performance while significantly extending component service life and reliability.

### Standard Fill Lubricants

Transmission and Drive Axle lubricants must meet a number of lubricant industry requirements. Refer to the enclosed charts to select the proper lubricant.

### Extended Drain Lubricants

Extended Drain Roadranger synthetic lubricants offer superior thermal and oxidative stability for extended product performance and reliability.

The superior performance characteristics of these lubricants enable Eaton to offer extended drain and extended warranties. Added benefits include a more efficient drivetrain that translates into proven fuel economy savings over mineral based lubricants.

**Important:** Using Extended Drain Roadranger synthetic lubricants is required to maintain Eaton extended warranties.

It is important to use the lubricants that meet the current specifications set by Eaton. Look for the appropriate approval code on the container.

**Note:** for additional information on Roadranger lubrication, see the Roadranger Products Lubrication Manual TCMT0021.

### Approved Lubricants

The following is a list of lubricants approved by Eaton for use with the Roadranger® drivetrain components. These lubricants have passed the appropriate Performance Specification for the type of service and lubricant drain interval.

If the transmission and drive axles are factory filled with approved lubricants, any top off lubricant must also be an approved lubricant in order to keep the extended warranty (if applicable) and extended drain interval intact.

### Approved Lubricant Specifications for Extended Drain Intervals

#### Transmission

LUBRICANT SPECIFICATION	DRAIN INTERVAL
PS-164 REV 7	500,000 miles

#### Drive Axle

LUBRICANT SPECIFICATION	DRAIN INTERVAL
SHAES-256 Rev C	500,000 miles
SHAES-429 (Vocational)	3 yr / 180,000 miles

## Lubrication Intervals

### Line Haul - 500,000 Mile Extended Lube Drain Interval

The extended drain interval program applies to the Eaton transmissions listed below that meet the following conditions:

- Heavy Duty and Medium Duty transmissions and axles
- Line haul service (On-highway)
  - Lubricant Approval Levels:  
Transmission - PS 164 Rev 7  
Drive Axle - SHAES 256 Rev C
- Factory filled with lubricants approved for 500,000 mile drain cycles (US/Canada) 250,000/400,000Km (Outside US/Canada)
- Refer to charts listed in this manual for transmission and axle drain intervals when using “Extended Drain Lubricants”
- A Roadranger approved lubricant must be used to keep the extended warranty in place. The extended drain program and any extended warranty program are separate programs.

### Vocational - 180,000 Mile Extended Lube Drain Interval

- 180,000 mile or three (3) year extended drain interval.
- The approved lubricants may be factory installed at the truck manufacturer, or service filled up to 500 miles, and may remain in the transmission and drive axles for the 180,000 mile or three (3) year drain interval (whichever comes first).

Lubricant approval levels:

- Transmission - PS 164 Rev 7
- Axle - SHAES 256 Rev C or SHAES 429

**Note:** For specific detail on Eaton extended warranty programs, refer to the Roadranger Warranty Guide, TCWY0900, or call 1-800-826-HELP (4357).

## Vehicle Application Definitions

### Line Haul (On-highway)

- High mileage operation (over 60,000 miles [96,500 Km] per year).
- On-highway or good to excellent concrete or asphalt.
- More than 30 miles [48 Km] between starting and stopping.
- 4x2, 6x2, 6x4 tractor/trailer combinations and straight tucks.
- Check fluid levels and inspect for leaks at regular PM maintenance intervals, not to exceed 12,000 miles

### Vocational

- Low mileage operation (under 60,000 miles [96,500 Km] per year).
- Off-highway or areas of unstable or loose unimproved road surfaces.
- Less than 30 miles [48 Km] between starting and stopping.
- Heavy-Duty, off-road or specialized application type vehicles.
- Check fluid levels and inspect for leaks every 50 hours.

## Warnings and Cautions

**Never mix engine oils and synthetic transmission oils in the same transmission. When switching between types of lubricants, all areas of each affected component must be thoroughly drained.**

**Do not introduce additives and friction modifiers.**

**Do not mix lubricants of different grades.**

**Do not mix mineral and synthetic lubricants.**

**Do not mix heavy-duty, multi-purpose lithium based (#2 grade) grease with Sodium based grease.**
